Masimo > Rad-57™

> Technology

- > More than 100 independent and objective studies demonstrate Masimo SET provides the most reliable SpO₂ and pulse rate measurements even under the most challenging clinical conditions, including patient motion and low peripheral perfusion.
- > Masimo Rainbow® SET technology analyzes multiple wavelengths of light to accurately measure total hemoglobin (SpHb™), oxygen content (SpOC®), carboxyhemoglobin (SpCO™), methemoglobin (SpMet®), and PVI® noninvasively and continuously.

> Clinical Benefits

- > **Masimo SET pulse oximetry** - Virtually eliminates false alarms without missing true clinical events.
- > **Upgradeable Rainbow SET Pulse CO-Oximetry** - Compared to traditional invasive measurements, noninvasive and immediate measurements may allow clinicians to provide faster diagnosis, initiate treatment earlier, and improve efficiency.
- > **Total Hemoglobin (SpHb)** - Detect chronic or acute anemia, identify hemorrhaging earlier, aid in optimal transfusion management.
- > **Oxygen Content (SpOC)** - By calculating hemoglobin and oxygen saturation, SpOC provides a more complete picture of your patients' oxygenation status.
- > **Carboxyhemoglobin (SpCO)** - Detect carbon monoxide (CO) poisoning.
- > **Methemoglobin (SpMet)** - Identify methemoglobinemia, a dangerous and deadly reaction caused by many drugs routinely administered in the hospital.
- > **PVI** - Predict fluid responsiveness, aid fluid management.
