

Ambu[®] Wireless

Here to make a real difference

Airway Management | Patient Monitoring & Diagnostics | ■ Emergency Care

"I've never felt this free before. It feels like there's nothing I can't do"

Ambu Man – with 22 years of experience with CPR

Ambu Wireless is the new generation of professional manikins. The first basic resuscitation manikin on the market free of all wires and cables. The wireless technology gives the manikin much more mobility, which in turn gives you the freedom you need to practice resuscitation in a moving ambulance, create realistic rescue scenarios or even teach up to 10 students simultaneously.

We have more than 22 years of experience designing training manikins for use in places as diverse as hospitals, fire stations and the military. We know just as well as you do that the difference between life and death often comes down to being well prepared. Ambu Wireless will help you be just that.

[Proudly presenting the new Ambu Wireless – here to make a real difference]

**”He’s a real team-player.
He never complains and
he never calls in sick!”**

Ambu Wireless – practice while moving

Imagine your students practicing resuscitation in a moving ambulance. Attempting to keep their balance and calm, while the ambulance accelerates, brakes and turns. Swerving its way through the traffic. Meanwhile you’re in the front seat following their progress in real-time on your laptop.

Ambu Wireless – the more realistic the training, the more your skills will improve

Creating realistic scenarios like this one for training is now possible thanks to the new Ambu wireless manikins. Better training opportunities will give your students the edge they need when they are out there in the real world. Ambu Wireless makes training so close to the real thing that you can almost forget your manikin is not actually real.

[Ambu Wireless – here to make a
real difference]

**"He's always the first one in,
I really admire that kind
of dedication"**

Ambu Wireless – a wider range of possibilities

How will your students practice their resuscitation skills in your next training session?

Maybe they'll be called to a search and rescue in a burning house? Perhaps a car accident? It's only

your creativity and imagination that limit the new possibilities for your training. Ambu Wireless has no cables giving it much greater mobility. This advance, together with the improved CPR-software, will mean you can say goodbye to repetitive, uninspiring training

sessions. Your students will get new, more realistic challenges in many more realistic scenarios than before. Only when you start planning your next training session will you truly appreciate your new Ambu Wireless.

Ambu Wireless – this time, practice is different

You practice to have your techniques honed for when you really need them, but with Ambu Wireless you can practice without having to do the same thing over and over again. Variation in the scenarios will keep you alert, precisely because things are different every time. So every session can be a new challenge. Even fun.

**[Ambu Wireless – here to make a
real difference]**

**"He's a real tough guy.
Even when we use the
defibrillator he doesn't
move a muscle."**

**”He’s a perfectionist -
just like me!”**

Ambu Wireless – supervise several students at the same time

The Ambu Wireless with the new Ambu CPR software lets an instructor monitor up to ten students doing

resuscitation practice at a time – and from up to 50 metres away. You can follow closely what they are doing without getting in their way, and there are no cables or wires to think about – or make your classroom

untidy. Once practical training is finished, the unique CPR software provided with Ambu Wireless lets you and your students analyse what they did in greater detail.

Ambu Wireless will give your students more hands-on experience

We know that resuscitation is not something anyone can learn from a textbook. It needs to be performed and practiced – again and again. The new Ambu Wireless will help you give your students more opportunities to perfect their techniques and feel even more comfortable with their skills.

real difference]**

Ambu Wireless – here to meet your need

Ambu has developed a reliable, cable-free manikinmanikin that allows training scenarios to be more realistic, varied and flexible. Ambu Wireless comes in several different models each designed to suit your particular needs. Think of Ambu Wireless simply as an upgrade for your resuscitation training.

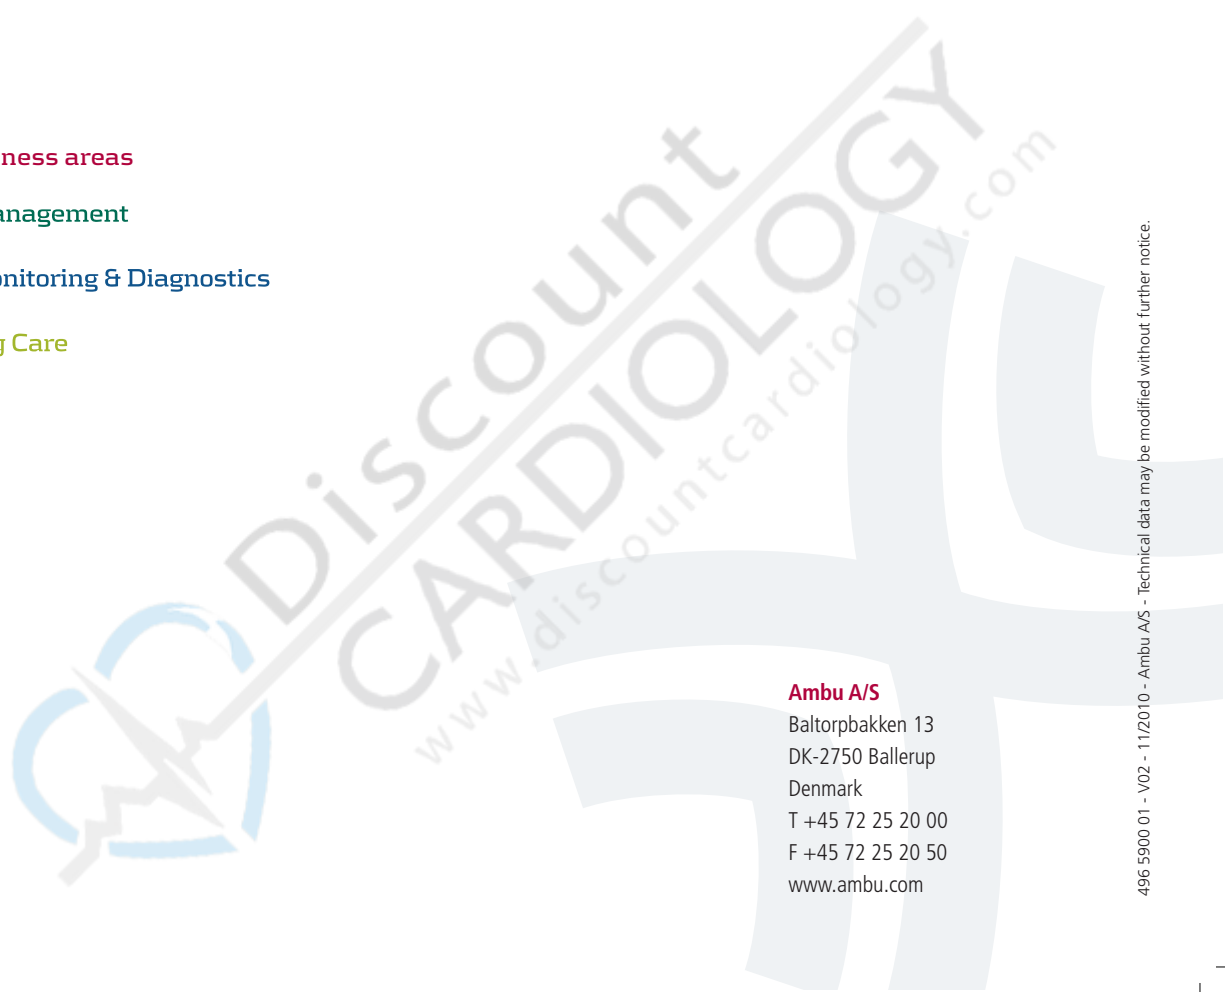

Our basic modern resuscitation products – the Ambu Man Wireless and the Ambu Defib Man Wireless – both have the new wireless advantages. We also offer more advanced products: for ACLS (Advanced Cardiac Life Support) there is the Ambu Cardiac Man Wireless, and for teaching Airway Management there is the Ambu Airway Man Wireless. Ambu Man Wireless and Ambu Defib Man Wireless both come with our well-known patented hygienic system to avoid cross-contamination. All Wireless manikins are supplied with our unique Ambu CPR software that allows you to monitor and analyse the resuscitation from a distance of up to 50 metres and in much greater detail than before. See the diagram or the individual information sheets for more details.
