Product Description

The Ivy Biomedical Systems' Model 7800 is our fifth generation of cardiac gating monitors. It is ideal for use in applications requiring precision ECG R-wave synchronization, such as computed tomography (CT) imaging systems for cardiac and vascular studies.

Value added features include: auto ECG lead selection ensures the best trigger vector will be used; built-in ECG simulator for pre-scan testing of the entire system; electrode impedance check for reliable scans; X-Ray on signal input enables ECG waveform file capture for post scan analysis; two channel, electrically isolated Ethernet port allows for data interface to both the console and gantry display. An optional strip chart recorder is also available for hardcopy documentation of ECG rhythms.

Ivy Biomedical System's renowned high quality and reliability ensure consistent uptime and long operational life.
