

Inspiring innovation. Every day.

EasyOne Sky

with **nddCloud**

simplifying workflows

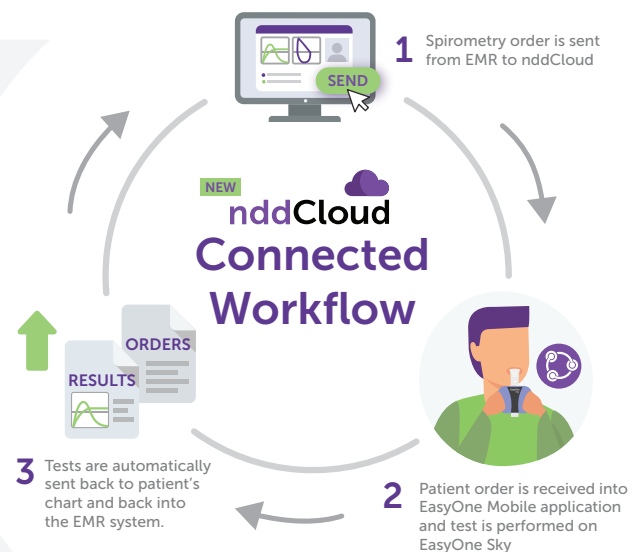

Trusted Cybersecurity

Secure | Connected | Compliant

In today's healthcare landscape, protecting patient data is not optional—it's critical.

EasyOne Sky from n d d Medical Technologies is a cloud-connected spirometry solution designed with state-of-the-art cybersecurity at its core.

Powered by **nddCloud**, it enables seamless EMR integration while ensuring your data remains secure and accessible.

Security-first design from the ground Up

nddCloud is built using advanced security protocols and architecture trusted across regulated industries:

End-to-End Encryption (HTTPS)

All data is encrypted in transit with TLS 1.2 and AES 356 for real-time, secure communication.

SFTP File Transfer

Choose from client-hosted, EMR-hosted, or ndd-hosted options for secure, flexible data exchange.*

Custom Secure Integrations

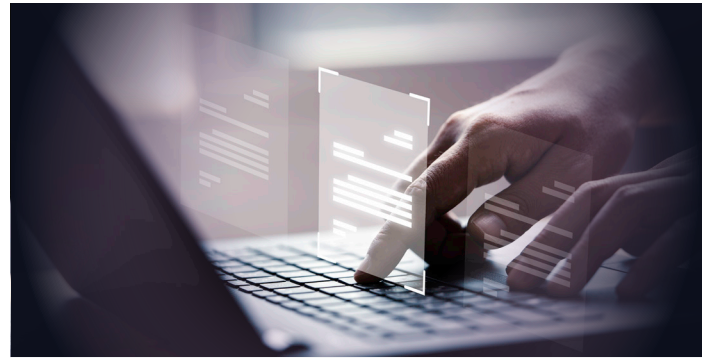

Have unique cybersecurity or compliance requirements? We'll tailor a secure solution for your environment.*

User-Based Access Control

Connectivity is tied to individual user accounts—not devices—ensuring tighter control and easier auditability.

**Custom integrations may incur additional cost.*

Secure workflow integration

Order Transmission (Encrypted)

Orders sent from your EMR to nddCloud using HTTPS or SFTP—compliant, protected, and efficient.

Authentication-Verified Test Execution

Only authorized users access and perform spirometry, ensuring traceability and compliance.

Encrypted Results Return

Test data is automatically and securely uploaded to the patient record—no manual handling or exposure risk.

Security that simplifies compliance

- Meets modern HIPAA and GDPR requirements
- No local storage needed on devices—reducing breach surface
- Rapid deployment without compromising IT or clinical workflows
- Supports multi-site security standards with centralized cloud controls

Why security-minded clinics choose EasyOne Sky

- Built-in encryption for all connections
- Device-agnostic, user-authenticated access
- Seamless EMR integration without compromising security
- Custom connectivity options for complex IT infrastructures
